

TxImhotep, LLC

SecureBase Governance Platform & Workforce Development Initiative

SBA Business Plan · 2026

Founder & Principal Cloud Architect

Cedrick J. Byrd

25+ Years AWS Infrastructure & DevSecOps

Mexia, Texas · Limestone County

Confidential — Prepared for SBA Lending Review

1. Executive Summary

Txlmhotep, LLC is a Mexia, Texas–based technology and workforce development company founded on the principle that secure cloud governance should be accessible, accountable, and rooted in regional economic growth. We develop and operate SecureBase — a cloud-native executive risk governance platform — and pair it with a dedicated workforce development program designed to create high-value technical employment pathways in Limestone County and the broader Central Texas corridor.

The company is led by Cedrick J. Byrd, a Principal Cloud Architect with over 25 years of hands-on experience in AWS infrastructure engineering, DevSecOps, and enterprise compliance architecture. This deep technical foundation enables Txlmhotep to deliver governance capabilities that speak directly to the operational and regulatory pain points faced by healthcare organizations, financial institutions, and government contractors.

Friction Acceptance Strategy

Txlmhotep deliberately engineers friction into its governance workflows — making compliance checkpoints visible, auditable, and board-reportable rather than bypassed. This "friction acceptance" philosophy transforms compliance burden into competitive accountability infrastructure, differentiating SecureBase from point-solution tools that optimize for speed at the expense of defensibility.

SBA funding will accelerate product development, expand the Texas-based engineering team, and fuel enterprise pipeline growth — positioning Txlmhotep as the recognized governance partner for regulated industries across Texas and the South-Central region.

2. Company Description

Legal & Organizational Structure

Detail	Information
Legal Entity	Txlmhotep, LLC
State of Formation	Texas (Limited Liability Company)
Headquarters	Mexia, Texas — Limestone County
NAICS Code	541512 — Computer Systems Design Services
SAM.gov Registration	Active / In Process
Year Founded	2026

Leadership

Cedrick J. Byrd serves as Founder and Principal Cloud Architect. His career spans over two decades of enterprise cloud architecture, with deep specialization in:

- AWS-native infrastructure design and migration at enterprise scale
- DevSecOps pipeline automation and policy-as-code implementation
- SOC 2 Type II, HIPAA, and FFIEC compliance architecture
- Immutable audit logging, cryptographic evidence chains, and board-level reporting

This hands-on technical background distinguishes TxImhotep from governance consultancies that rely on generalist project managers — every SecureBase feature traces directly to real-world compliance engineering experience.

Strategic Location Rationale

Mexia's position in Limestone County is not incidental — it is central to the company's workforce development mission. By anchoring operations in an underserved rural community, TxImhotep creates a replicable model for high-skill technical job creation outside major metro corridors, aligning with SBA 7(a) and rural development lending priorities.

3. Mission & Vision

Mission

To strengthen organizational resilience through secure cloud governance, compliance automation, and workforce development — supporting long-term economic growth and operational accountability for regulated industries across Texas and beyond.

Vision

To be the recognized Texas-based standard for executive risk governance in regulated industries, while building a replicable model for high-value technical employment creation in emerging and underserved markets.

Core Values: Friction Acceptance as a Governance Principle

Most technology vendors optimize for frictionless experience — faster approvals, fewer checkpoints, streamlined workflows. TxImhotep takes a deliberate counterposition: purposeful friction, properly engineered, is the foundation of defensible governance.

- Friction Acceptance means embedding accountability checkpoints that resist bypass
- It means designing audit trails that are immutable and board-reportable by default
- It means that slowing down to document a decision is not inefficiency — it is evidence

This philosophy shapes every feature of SecureBase and every engagement with clients. Organizations that embrace friction acceptance build compliance postures that survive regulatory scrutiny, litigation discovery, and cyber incident response.

4. Products & Services

4.1 SecureBase Platform

SecureBase is a cloud-native governance and executive risk management platform built on AWS. It is designed to serve as the operational backbone for compliance programs in regulated industries — translating technical control evidence into board-consumable risk intelligence.

Executive Risk Dashboard

- Real-time risk scoring aggregated across compliance domains (SOC 2, HIPAA, FFIEC)
- Board-ready reporting with exportable evidence packages and audit-ready formatting
- Role-based access controls with granular visibility for executives, auditors, and IT operations
- Configurable risk thresholds with automated escalation and notification workflows

Compliance Automation Engine

- SOC 2 Type II control mapping with continuous evidence collection
- HIPAA Security Rule automated gap assessment and remediation tracking
- FFIEC Cybersecurity Assessment Tool (CAT) alignment for financial institution clients
- Policy-as-code enforcement integrated into CI/CD pipelines via AWS native services

Immutable Snapshot Reporting

- Cryptographically signed audit snapshots stored in tamper-evident AWS infrastructure
- Point-in-time compliance state capture for litigation, regulatory examination, and incident response
- Chain-of-custody documentation supporting e-discovery and regulatory inquiry response
- Automated snapshot scheduling with retention policies aligned to industry standards

Friction Acceptance Module

- Governance checkpoint enforcement — workflow gates that require documented approvals before privileged actions
- Exception tracking with mandatory justification capture and time-bounded approvals
- Deviation audit trail preserving every override, bypass attempt, and escalation for regulatory review
- Board-level exception reporting distinguishing acceptable risk decisions from compliance failures

Competitive Differentiator

Unlike SIEM platforms and point compliance tools that generate alerts without accountability context, SecureBase connects technical evidence directly to executive decision-making workflows. Boards see what was decided, who approved it, and what evidence justified the risk acceptance — not just what the monitoring system flagged.

4.2 Workforce Enablement Program

TxImhotep's workforce development program operationalizes the company's commitment to regional economic impact. This is not a CSR initiative — it is a core business function that creates a sustainable, locally-developed talent pipeline for SecureBase operations and client delivery.

- Structured apprenticeship tracks in cloud infrastructure, DevSecOps, and compliance engineering
- Partnerships with Navarro College and Mexia ISD for dual-enrollment and workforce transition pathways
- Mentorship from senior practitioners with active client engagement — not theoretical instruction
- Preference for Limestone County and Central Texas candidates with demonstrated technical aptitude

4.3 Compliance Advisory Services

For organizations modernizing cloud governance workflows, TxImhotep provides strategic advisory engagements that bridge technical implementation and regulatory requirement. Services include pre-audit readiness assessments, control design reviews, board presentation preparation, and regulatory examination preparation for financial institutions.

5. Market Analysis

5.1 Target Market Segments

Market Segment	Engagement Rationale
Regional Healthcare Organizations	HIPAA compliance burden + board risk reporting demand
Texas Bankers Association Members	FFIEC examination readiness + executive accountability
SAM.gov Government Contractors	CMMC / FedRAMP alignment + immutable audit requirements
Rural Utility & Energy Cooperatives	NERC CIP compliance + limited in-house governance capacity
Texas Credit Unions	NCUA cybersecurity examination + shared services cost pressure

5.2 Market Opportunity

The U.S. cloud governance and GRC (Governance, Risk & Compliance) software market exceeded \$14 billion in 2025 and is projected to grow at a CAGR exceeding 13% through 2030, driven by escalating regulatory requirements, board-level cybersecurity accountability mandates, and the increasing cost of compliance failures in regulated industries.

Texas represents a disproportionately attractive regional opportunity: the state hosts the second-largest concentration of FDIC-insured financial institutions in the U.S., over 500 HIPAA-covered hospital systems, and a growing federal contractor base anchored by defense and energy sector procurement.

5.3 Competitive Positioning

SecureBase competes in a landscape dominated by enterprise GRC platforms (ServiceNow GRC, RSA Archer) that are priced and architected for Fortune 500 organizations, and point compliance tools (Vanta, Drata) that optimize for speed-to-certification without board-level accountability depth.

TxImhotep's competitive moat rests on three pillars:

- Friction Acceptance Architecture — purposefully engineered governance checkpoints that survive regulatory examination and litigation discovery, not just audit checklists
- Regional Expertise — deep familiarity with Texas Bankers Association examination expectations, HHSC healthcare compliance frameworks, and state-specific regulatory context
- Operational Simplicity at Scale — enterprise-grade governance capabilities delivered at mid-market price points, eliminating the tradeoff between affordability and defensibility

6. Operational Plan

6.1 Technology Infrastructure

SecureBase is built entirely on AWS-native services, enabling horizontal scalability, regional data residency compliance, and direct integration with client AWS environments. Core infrastructure components include:

- Amazon EKS (Elastic Kubernetes Service) for containerized microservices orchestration
- AWS CodePipeline and CodeBuild for CI/CD automation and policy enforcement gates
- Amazon S3 with Object Lock (WORM) for immutable evidence and snapshot storage
- AWS CloudTrail, Config, and Security Hub for continuous compliance monitoring and evidence collection
- Amazon RDS (encrypted) and DynamoDB for operational and audit data persistence
- AWS IAM Identity Center for role-based access control and cross-account governance

6.2 Security & Compliance Posture

TxImhotep practices what it preaches. The SecureBase platform operates under the same governance frameworks it enables for clients:

- SOC 2 Type II readiness as a foundational operational requirement (not a marketing claim)
- AWS Well-Architected Framework review conducted semi-annually
- Penetration testing and vulnerability assessment on a defined schedule
- Incident response plan with defined RTO/RPO commitments for enterprise clients

6.3 Workforce Development Operations

The Mexia headquarters functions as both an operational center and a workforce development hub. The operational model integrates apprentices and junior practitioners into live client delivery under senior supervision — creating real-world competency development rather than siloed training programs.

Year 1 workforce development targets:

- 2–4 apprentice/junior cloud practitioners enrolled in structured 12-month tracks
- Formal partnerships with at least one regional educational institution
- Documented career progression framework with defined competency milestones

7. Financial Plan & SBA Funding Request

7.1 Funding Request Overview

TxImhotep, LLC is seeking SBA 7(a) loan financing to accelerate platform development, build the core Texas-based engineering team, and establish enterprise sales infrastructure. The funding request supports an 18–24 month growth runway from initial disbursement to cash-flow positive operations.

7.2 Use of Proceeds

Category	Allocation	Est. Amount	Purpose
Product Development	28.6%	\$10,000	SecureBase feature scaling & R&D
Hiring & Payroll	28.6%	\$10,000	Core engineering team (TX-based)
Sales & Marketing	14.2%	\$5,000	Enterprise pipeline expansion
Cloud Ops & Legal	28.6%	\$10,000	AWS infrastructure & compliance reserves
TOTAL	100%	SBA Loan Request (\$35,000.00)	

7.3 Revenue Model

SecureBase generates recurring revenue through a subscription-based SaaS model, supplemented by professional services revenue from compliance advisory engagements:

- Platform Subscriptions — tiered annual SaaS licensing based on organizational size and compliance scope (\$24K–\$120K ARR per client)
- Compliance Advisory Retainers — structured quarterly engagements for ongoing governance support (\$8K–\$40K per engagement)
- Examination Preparation Packages — time-bounded regulatory readiness engagements for FFIEC and HIPAA examination cycles

- Workforce Development Grants — state and federal workforce development funding to offset apprenticeship program costs

7.4 Financial Projections Summary

Metric	Projection
Year 1 Target ARR	\$168,000.00 (\$120k SaaS + \$48k Consulting)
Year 2 Target ARR	\$240,000.00
Year 3 Target ARR	\$528,000.00
Break-Even Timeline	12–18 months post-funding
Initial Client Target	3–5 enterprise accounts (Year 1)
Average Contract Value	\$24,000 – \$48,000 ARR

SBA Alignment Note

This funding request aligns with SBA 7(a) program priorities including small business growth, rural economic development (Limestone County), technology sector job creation, and underserved market access. TxImhotep's Mexia headquarters directly supports rural community economic development objectives.

7.5 Key Financial Assumptions

- Sales cycle of 90–180 days for enterprise regulated-industry clients
- 12-month average contract term with 80%+ renewal rate target
- AWS infrastructure costs scaling proportionally with client onboarding (estimated 15–18% of revenue at scale)
- Workforce development grant funding partially offsetting apprenticeship program labor costs
- No debt service coverage ratio constraints anticipated based on projected Year 2 cash flows

8. Risk Assessment & Mitigation

Risk Factor	Mitigation Strategy
Competitive displacement by enterprise GRC platforms	Mid-market pricing + TX regional expertise + friction acceptance differentiation
Slow enterprise sales cycles extending runway	Advisory services revenue to bridge subscription ARR buildup

AWS infrastructure cost overruns	Reserved instance commitments + auto-scaling guardrails + cost anomaly alerts
Regulatory framework changes (HIPAA, FFIEC)	Modular compliance framework architecture enables rapid adaptation
Workforce development talent pipeline gaps	Dual-enrollment partnerships + structured apprenticeship program
Client concentration risk (early stage)	Diversified segment targeting across healthcare, banking, and govcon

9. Appendices

The following supporting documentation is available upon request from the SBA lender:

- Founder Resume — Cedrick J. Byrd (full AWS certification history and engagement references)
- SecureBase Technical Architecture Overview (AWS Well-Architected alignment)
- Letters of Interest — identified target client organizations (available upon engagement)
- SAM.gov Registration Confirmation
- Texas Secretary of State LLC Formation Documents
- Proposed 18-Month Implementation & Hiring Timeline
- Navarro College / Mexia ISD Workforce Partnership Framework (in development)
