

FFIEC Sales Playbook Integration

Operationalizing "Exam-Readiness" for the SecureBase Platform

Executive Summary

This document outlines the integration of the **FFIEC Sales Playbook** into the SecureBase product roadmap and market outreach strategy. The goal is to move beyond technical compliance and provide a "defense-ready" posture for financial institutions.

1. Structural Integration into SecureBase-App

The "Examiner Dashboard"

Rather than a generic infrastructure view, the app will feature a dedicated toggle for FFIEC Handbook views. This maps technical controls (e.g., AWS KMS settings) directly to:

- **Information Security:** Section II.C (Encryption & Integrity)
- **Business Continuity Management (BCM):** Resilience and failover evidence.
- **Development and Acquisition:** CI/CD pipeline integrity and sovereign code controls.

2. Sales & Pricing Alignment

The playbook dictates a shift from low-touch "jumpstarts" to high-touch "readiness" assessments.

- **Tiering:** The \$495 tier is retired for this segment. FFIEC becomes a feature of the **Standard/Enterprise** tiers.

- **The "TBA" Bundle:** Special integration for Texas Bankers Association members, focusing on community bank scale and the FFIEC Cybersecurity Assessment Tool (CAT).

"We don't sell software; we sell a clean audit trail for the next FDIC/OCC visit."

3. Competitive Edge: Sovereign Infrastructure

A key playbook element is the **Sovereign Cloud** narrative. SecureBase will emphasize that bank data stays within specified geographical and jurisdictional boundaries, directly addressing vendor management and regulatory data residency concerns.

4. Outreach Formula

The core value proposition is defined by the preparedness function:

$$R = (E \times D) / A$$

(Readiness = Evidence × Documentation / Anxiety)
